This document describes the necessary steps to prepare your company laptop for this course. It's expected that your current privileges will allow you to complete these steps, but if you encounter any difficulty, please inform us before the beginning of the workshop.
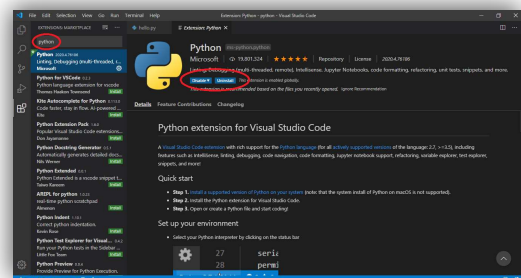

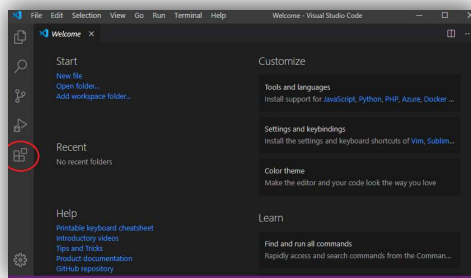

1. Install Visual Studio Code
   a. Go to this URL: https://code.visualstudio.com/Download
   b. Select the "User Installer 64 bit" version.

   c. After the download, install the application. Be sure to **check "Add to PATH"** when asked to "Select Additional Tasks" during installation.

2. Add python extension to you Visual Studio Code installation
   a. Open Visual Studio Code and click on the Extensions button. Search and Install "Python" extension.

   b. Close Visual Studio Code.

3. Install Python
    a. Go to https://www.python.org/downloads/windows/, scroll down to the 3.8.2 executable installer and download it.

    b. When installing, ensure that the initial options are configured as the picture below, and then select "Install Now"

    c. When the installation is completed click the "Close" button.

4. Reboot your Laptop 😋
